PROJECTS

CMMS: Computerized Maintenance Management System
Thesis Team Project
In the thesis Project, I worked on the authentication with email part as well as the home page, the charts, the design of the whole app using Angular for the frontend and Nodejs and mongoose for the backend. It was a project for one month.

MASH Bank: A loan simulator for banks
Team Project: Legacy
This Project was a refactoring for the greenfield project to the Vue js framework for frentend and MongoDB for backend. It is a project for one week.

OSA Bank: A loan simulator for banks
Team Project: Greenfield
In this project I worked as a Scrum Master for a team of three members. Technically I worked on authentication, home page and the loan simulator using React for frontend and Mongoose for backend. It is a project for one week.

Makeup filter
Solo Project: MVP
In this project I worked solo using React for frontend and Mongoose for backend. It was a project for one day.
